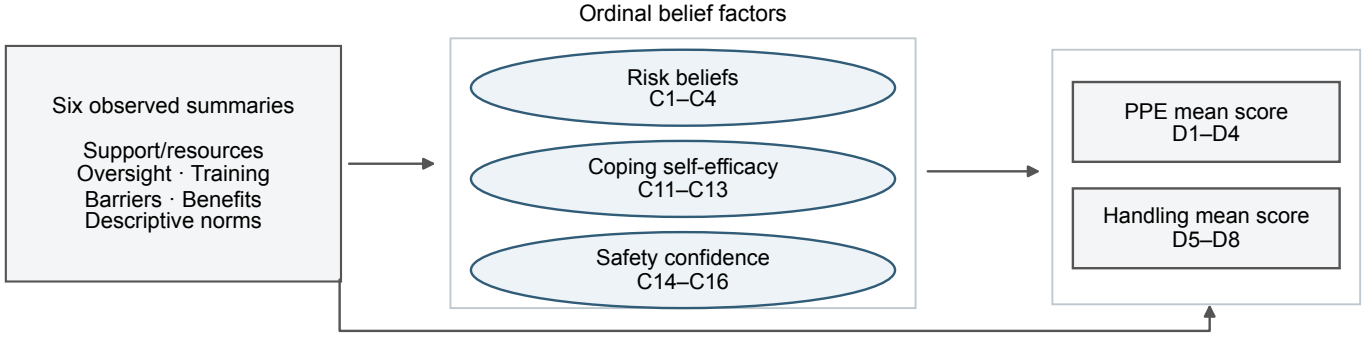
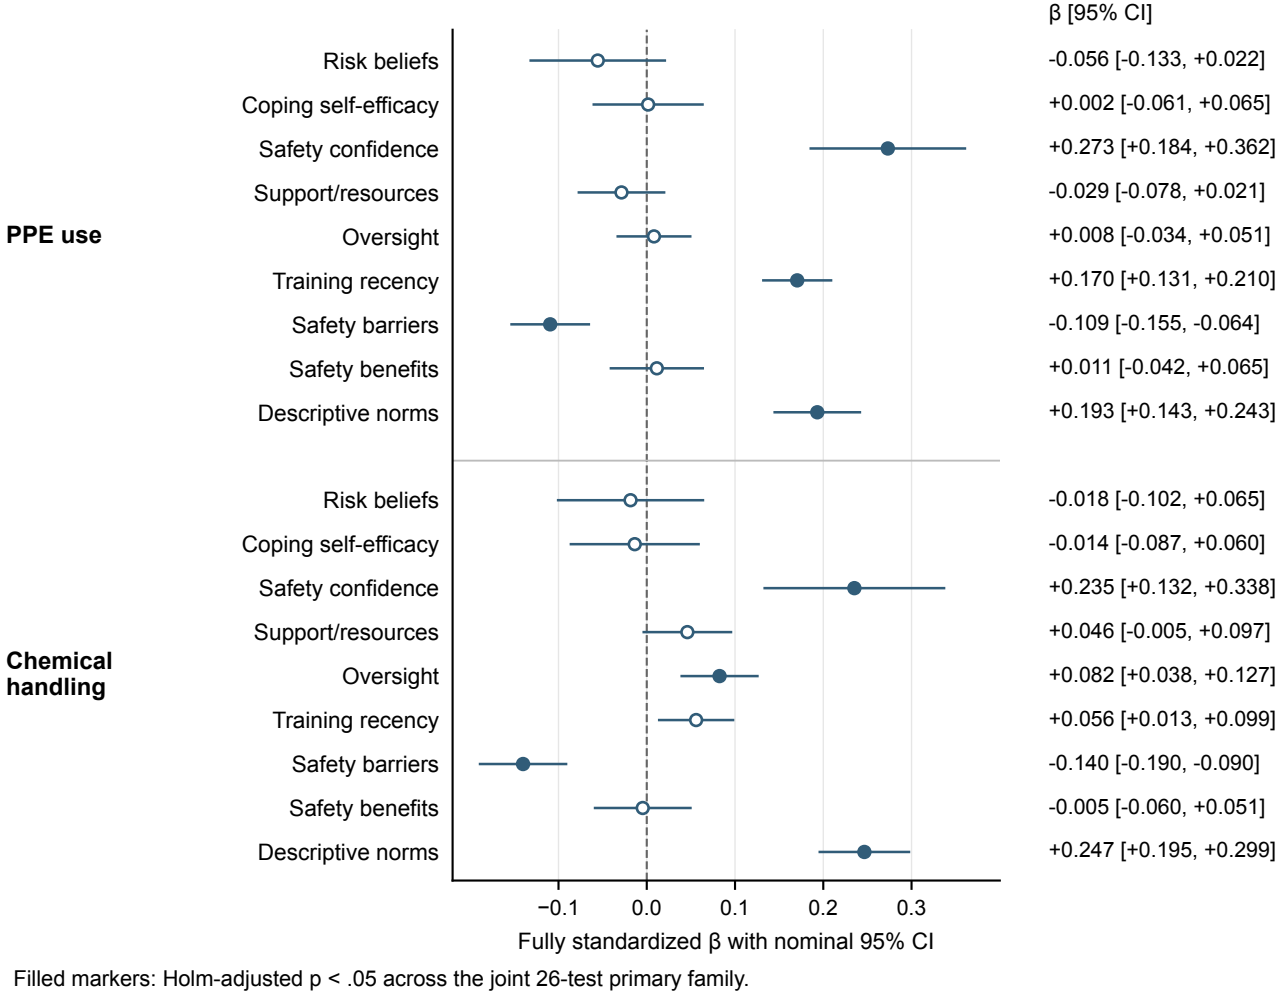
A Hybrid measurement and behavioral specification



The six observed summaries also directly enter both practice equations.

Country and A1–A11 enter every equation as categorical dummy controls.
Belief-factor residuals freely covary; the PPE and handling residuals covary.

B All direct behavioral associations (n = 1,832)



Filled markers: Holm-adjusted p < .05 across the joint 26-test primary family.

Intervals are nominal delta-method intervals; arrows and coefficients do not establish causation.
